

## **AMENDMENTS TO THE DRAWINGS**

Certain drawings were objectionable under 37 C.F.R § 1.83(a) in that the drawings must show every feature of the invention specified in the claims. In response to the Examiner's objections, the applicants submit herewith annotated drawings showing proposed corrections in "red line" format. Also, for ease of reference, structural features of the figures are now numbered with reference numerals to correspond with the amended written specification.

To further explain the figures, the applicants would like to point out that Figure 1 shows the inventive universal chassis which accepts a variety of snap-on components, as do figures suffixed with E (e.g., 2E, 3E, 4E, and 5E). Figures suffixed with the letter G show a fully assembled vehicle corresponding to one of the four vehicle body styles including, e.g., "Minion", "Blendo", "Killerhurtz", and "Vlad". Figures suffixed with the letters A and H show how to assemble one of the aforementioned body styles using available modular components. Figures suffixed with the letters C and J show exploded views of weapon subassemblies for the aforementioned vehicle body styles. Figures suffixed with the letter F show drive wheel subassemblies and, if applicable to a particular body style, figures suffixed with the letter D show secondary wheel subassemblies. Body assemblies shown in figures suffixed with B and I provide the universal chassis with an overall appearance or "personality" corresponding to each of the aforementioned body types.
